

## How to Play Freaky Dodgeball

Freaky Dodgeball is a 2 player game, although it is a great game to start a tournament with more than 2 players.

Firstly the dealer deals out 15 cards to each of the two players.

The players then look through their cards and select their best 6 players and place them face down in front of them either using the downloadable/printable playing area or just on a flat surface. The other cards are put to one side and not required during the rest of the game.

A coin is then tossed (or other method) to select who will be the thrower first and start with the ball.

The thrower then selects one of his own players from the playing area (must play the first player they turn over) and selects score from one of the bottom 5 categories that he/she believes will win.

The thrower then selects a player from the opposing team who will need to dodge the throw. If the thrower wins with the highest score on the category, then the opposing player is out of the game and the thrower is able to throw again (the thrower must select a different player to throw), if it is a draw or the thrower loses, the ball control changes to the opposition and they then become the thrower.

The winning team is the last team to have players still on the playing area.

A full match is usually played with the best of 7 games and you are able to change players from your playing area and your substitutes in between games.
